

ASAPbill.com Receivables Management System

How it Works

Send /Receive Invoices

Create invoices online or import from QuickBooks. Email or print directly.

Customer Portal

Secure, online portal to view invoices and pay electronically.

Track

Record/Track payments received, send reminders, and review your cash flow.

ASAPbill.com Receivables Center enables you to keep track of your receivables online, anytime and anywhere via our secure online platform.

- **Create invoices online (or import them from QuickBooks)**
- **Let your customers manage their payment and invoices online**
- **Receive electronic payments from any customer**
- **Send invoices as a PDF attachment (or print and mail)**
- **Track payments**
- **Send reminders to your customers**
- **Review your cash flow on a daily, weekly, or monthly basis**

ePayments

With our Receivables Center, you can receive electronic payments from any customer, saving you time and money in a traditional collections environment.

- ❖ ePayment costs are structured as a low flat-fee instead of higher merchant fees from credit card providers.
- ❖ Payments are automatically applied to invoices and can synchronize with your QuickBooks data.

Your Customers

To enable your customers to pay you electronically, you will create a login for your customers to access your "Customer Portal".

A "Customer Portal" has the following benefits:

- ❖ Your customers will login to your branded "Portal" (your logo and company information);
- ❖ Your customers can view the history of all invoices and payments online.
- ❖ Your customer will see invoices updated in real-time (customers see the same information you see when viewing the invoices/payments for that customer in the Receivables Center);
- ❖ Your customers can pay invoices electronically (from their bank account) so they will save on mailing costs.

Syncing with QuickBooks

Any changes to customer accounts (address, billing information, contact), services, items, etc. made in either QuickBooks or Bill.com will be synchronized.
